DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

2. In regards to claim 1, although the closest reference of record, i.e., Furumiya et al., discloses recording test pattern and determining the jitter value associated with the test pattern, and further selecting an optimized write parameters; however, neither Furumiya nor any reference of record alone or in combination discloses a method of determining an optimum set of write parameters for a laser device for writing to an optical storage medium, the method comprising acts of:

defining a test region of the optical storage medium;

using a laser device having an operating set of write parameters, writing a reference data pattern using a reference set of write parameters of the laser device to the test region, and a measurement data pattern using a measurement set of write parameters of the laser device to the test region;

measuring jitter values for the reference and measurement data patterns; and

selecting an optimum operating set of write parameters of the laser device for writing data to the optical storage medium in dependence upon the measured reference and measurement jitter values, the optimum set of write parameters minimizing the jitter value for the optical storage medium,

Art Unit: 2627

wherein a power level of the laser device varies over the writing of the measurement data pattern and wherein the power level of the laser device over the writing of the reference data pattern is fixed.

Accordingly, claims 1, 4, 5, 7-11, 14, 15 and 17-26 are allowed.
